

INTELLIGENT EDGE MANAGED SWITCHES

Conectividad: Switch

SDVoE-Ready M4300-96X Up to 96-port 10G, PoE options

The NETGEAR® M4300 Stackable Switch Series delivers L2/L3/L4 and IPv4/IPv6 cost-effective services for mid-enterprise edge and SMB core deployments with unrivalled ease of use: 10/40 Gigabit models can seamlessly stack with 1 Gigabit models within the series, enabling spine and leaf line-rate topologies. Nonstop forwarding (NSF) virtual chassis architectures provide advanced High Availability (HA) with hitless failover across the stack. Intelligent NETGEAR IGMP Plus[™] multicast allows for scalable Pro AV installations at Layer 2 without the PIM complexity. Dual redundant, modular power supplies equipping full width models contribute to business continuity management. Layer 3 feature set includes static, dynamic and policy-based routing – as standard. The NETGEAR M4300 Switch Series is perfect for wireless access, unified communications and professional AV-over-IP installations.

NETGEAR Intelligent Edge Switch solutions combine latest advances in hardware and software engineering for higher flexibility, lower complexity and stronger investment protection, at a highvalue price point.

Highlights

Best-in-class stacking

- M4300 is flexible enough for mixed stacking between 10/40 Gigabit and 1 Gigabit models, using any 10G/40G port with any media type (RJ45, SFP+, DAC cables)
- High-availability is another key differentiator for stackable solutions: in case of a master switch failure, NSF and hitless failover ensure the standby switch takes over while forwarding plane continues to forward traffic on the operational stack members without any service interruption

10G/40G modular solution

- The M4300-96X scales from 8 to 96 ports of 10G Ethernet by multiple of 8 ports, and from 2 to 24 ports of 40G Ethernet by multiple of 2 ports
- The 96X lets you start small with copper and fiber, including Multi-Gigabit
 2.5G/5G and PoE+ over 10G, and grow later in "non-blocking" mode just by adding port expansion cards

Higher flexibility

- Two half-width M4300 switches can be paired in a single rack space for redundant Top of Rack installations with Auto-iSCSI prioritization
- Removing the need for Layer-3 PIM routing, IGMP Plus greatly simplifies system architectures with automated IGMP techniques across the entire AV over-IP network

Lower complexity

- Entire feature set including PTPv2, L2 switching (IGMP Plus) and L3 routing (static, RIP, OSPF, VRRP, PIM-SSM, PBR) is available without license
- DHCP/BootP innovative autoinstallation including firmware and configuration file upload automation

Investment protection

- Line-rate spine and leaf stacking topologies offer multiple possibilities in server rooms, in branch collapsed cores or at the edge of growing networks
- Even if an organization is not ready for high-speed backbone, 10G and 40G models can be added later to stacks of 1G models

Secure services

- With successive tiering, the Authentication Manager allows for authentication methods per port for a tiered authentication based on configured time-outs
- With BYOD, tiered Dot1x -> MAB Captive Portal authentication is powerful and simple to implement with strict policies

Industry standard management

- Industry standard command line interface (CLI), functional NETGEAR web interface (GUI), SNMP, sFlow and RSPAN
- Single-pane-of-glass NMS300 management platform with centralized firmware updates and massconfiguration support

Industry leading warranty

- NETGEAR M4300 series is covered under NETGEAR ProSAFE Limited Lifetime Hardware Warranty**
- 90 days of Technical Support via phone and email, Lifetime Technical Support through online chat and Lifetime Next Business Day hardware replacement

* For mixed stacking between more capable devices and less capable devices, SDM mixed stacking template is used based on "least common denominator" set of capacities and capabilities. Other SDM "native" templates can be used on superior platforms, for a larger table size. A stack requires an uniform table size across all stack members.

Product Brief

The M4300 Stackable L3 Managed Switch Series comes with 40G, 10G and 1G models in a variety of form factors including PoE+ full provisioning. M4300 Switch Series delivers IPv4/IPv6 rich services for mid-enterprise edge and SMB core with mixed stacking between 40-, 10- and 1-Gigabit models. Layer 3 feature set includes static and policy-based routing, RIP, VRRP, OSPF, and PIM dynamic routing. M4300 is ideal for server aggregation, wireless access, unified communications and Video-over-IP.

NETGEAR M4300 series key features:

- Cost effective 1G access layer in campus LAN networks, and high performance 10G/40G distribution layer for midsize organizations networks
- Zero Touch AV-over-IP with pre-configured L2 Multicast (SDVoE-ready)
- Advanced Layer 2, Layer 3 and Layer 4 feature set no license required including Policy Based Routing, RIP, VRRP, OSPF and PIM
- Innovative mixed "Spine and Leaf", 1G, 10G and 40G stacking with nonstop forwarding (NSF) and hitless failover redundancy
- Low acoustics, half-width 16-port and 24-port 10G models can be paired in a single rack space for redundant Top of Rack
- Modular 12-slot 2RU model scaling up to 96-port 10G by multiple of 8 ports or 24-port 40G by multiple of 2 ports
- Up to 768 (10 Gigabit) ports, 192 (40 Gigabit) ports or 384 (1 Gigabit) ports, or a combination in a single logical switch
- PoE+ (30 watts per port) with hot swap, redundant power supplies and full provisioning

NETGEAR M4300 series software features:

- Advanced classifier-based, time-based hardware implementation for L2 (MAC), L3 (IP) and L4 (UDP/TCP transport ports) security and prioritization
- Selectable Port-Channel/LAG (802.3ad 802.1AX) L2/L3/L4 hashing for fault tolerance and load sharing with any type of Ethernet channeling
- Voice VLAN with SIP, H323 and SCCP protocols detection and LLDP-MED IP phones automatic QoS and VLAN configuration
- Efficient authentication tiering with successive DOT1X, MAB and Captive Portal methods for streamlined BYOD
- Comprehensive IPv4/IPv6 static and dynamic routing including Proxy ARP, OSPF, Policy-based routing and automatic 6-to-4 tunneling
- Scalable Pro AV deployments with NETGEAR IGMP Plus[™] automatic L2 multicast (only subscribed videos flow from one switch to the other across the L2 topology)
- High performance IPv4/IPv6 multicast routing with PIM timer accuracy and unhandled PIM (S,G,rpt) state machine events transitioning
- Advanced IPv4/IPv6 security implementation including malicious code detection, DHCP Snooping, IP Source Guard protection and DoS attacks mitigation
- Innovative multi-vendor Auto-iSCSI capabilities for easier virtualization optimization

NETGEAR M4300 series resiliency and availability features:

- Dual redundant, modular power supplies equipping full width models contribute to business continuity management
- Vertical or horizontal flexible stacking with management unit hitless failover and nonstop forwarding (NSF) across operational stack members
- Spine and leaf architecture with every leaf switch (1G access switches) connecting to every spine switch (distributed 10G "core" switches)
- Stacking and distributed link aggregation allow for multi-resiliency with zero downtime and load balancing capabilities
- Link Dependency new feature enables or disables ports based on the link state of different ports
- Per VLAN Spanning Tree and Per VLAN Rapid Spanning Tree (PVSTP/ PVRSTP) offer interoperability with PVST+ infrastructures

NETGEAR M4300 series management features:

- DHCP/BootP innovative auto-installation including firmware and configuration file upload automation
- Industry standard SNMP, RMON, MIB, LLDP, AAA, sFlow, RSPAN and PTPv2 1-step transparent clock implementation (select M4300 models)
- Service port for out-of-band Ethernet management (OOB)
- Standard RS232 straight-through serial RJ45 and Mini-USB ports for local management console
- Standard USB port for local storage, logs, configuration or image files
- Dual firmware image for updates with minimum service interruption
- Industry standard command line interface (CLI) for IT admins used to other vendors commands
- Fully functional Web console (GUI) for IT admins who prefer an easy to use graphical interface
- Single-pane-of-glass NMS300 management platform with massconfiguration support

NETGEAR M4300 series warranty and support:

- NETGEAR ProSAFE Limited Lifetime Hardware Warranty**
- Included Lifetime Technical Support
- Included Lifetime Next Business Day Hardware Replacement

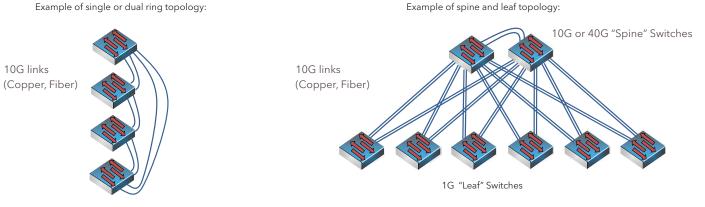

Modern access layer features highlights

High Density Layer 2/Layer 3/Layer 4 Stackable Switch Solution

M4300 switch series supports Nonstop Forwarding (NSF) virtual chassis stacking with up to 8 switches in a single logical switch, with hitless management failover

- Any 40G or 10G port (copper, fiber) and any media type (RJ45, SFP+, DAC) can be used for stacking on any M4300 models
- Hot-swappable stacking of up to 8 units, vertical or horizontal
- 40G and 10G models can stack with 1G models in legacy dual ring topologies, or innovative spine and leaf topologies
- L2, L3 and L4 switching features (access control list, classification, filtering, IPv4/IPv6 routing, IPv6 transition services) are performed in hardware at interface line rate for voice, video, and data convergence

M4300 series Layer 3 software package provides advanced IPv4/IPv6 fault tolerant routing capabilities for interfaces, VLANs, subnets and multicast

1G models: up to (4) 10G ports per switch can be used for stacking (depending on inter-switch links oversubscription requirements) 10G/40G models: up to (16) 40G or 10G ports per switch can be used for stacking (again, depending on oversubscription requirements between switches)

Best value switching performance:

96p 10G models: 256K MAC address table, 4K concurrent VLANs and 12K Layer 3 route table size for the most demanding enterprise or campus networks

48p 10G models: 128K MAC address table and same other constants as 96p 10G models

All other models: 16K MAC address table, 4K concurrent VLANs and 512 Layer 3 route table size for typical midsize environnements

Mixed stacking between more capable and less capable devices uses SDM template based on "least commom denominator" set of capacities and capabilities

Each switch provides line-rate local switching and routing capacity

80 PLUS certified power supplies for energy high efficiency

Full width models come with two PSU bays: a second PSU (sold separately) will add 1+1 power redundancy

Increased packet buffering with up to 96Mb (96p 10G models), 72 Mb (48p 10G models), 32 Mb (24p 10G models) and 16 Mb (all other models)

Low latency at all network speeds, including 40 Gigabit and 10 Gigabit copper / fiber interfaces

Jumbo frames support of up to 9Kb accelerating storage performance for backup and cloud applications

iSCSI Flow Acceleration and Automatic Protection/ QoS for virtualization and server room networks containing iSCSI initiators and iSCSI targets

- Detecting the establishment and termination of iSCSI sessions and connections by snooping packets used in the iSCSI protocol
- Maintaining a database of currently active iSCSI sessions and connections to store data, including classifier rules for desired QoS treatment
- Installing and removing classifier rule sets as needed for the iSCSI session traffic
- Monitoring activity in the iSCSI sessions to allow for aging out session entries if the session termination
 packets are not received
- Avoiding session interruptions during times of congestion that would otherwise cause iSCSI packets to be dropped

Tier 1 availability

Virtual Chassis Stacking technology upsurges overall network availability, providing both better resiliency in network architectures, and better performance with advanced load balancing capabilities between network uplinks

- Up to (8) M4300 switches can be aggregated using a virtual back plane and a single console or web management interface
- There is no 10G or 40G port pre-configured as Stacking port: all 10G or 40G ports are configured in Ethernet mode by default
 - Port configuration can be changed to Stack mode in Web GUI (System/ Stacking/Advanced/Stack-port Configuration)
 - Or using CLI command << #stack-port unit/slot/port stack >> in Stack Global Configuration section
- Other devices in the network see the stack as a single bridge or a single router
- Within the stack, a switch is elected (or chosen based on priority settings) as the "management unit" responsible for the stack members' routing tables
- Another switch is designated (or chosen based on priority settings) as an alternate, backup management unit
- In typical spine and leaf architectures, 10G / 40G "spine" switches are meant to handle management unit and backup management unit roles
- The Non-Stop Forwarding (NSF) feature enables the stack to secure forwarding end-user traffic when the management unit fails
- Non-Stop Forwarding is supported for the following events:
 - Power failure of the management unit
 - Other hardware failure causing the management unit to hang or to reset
 - Software failure causing the management unit to hang or to reset
 - Failover initiated by the administrator
 - Loss of cascade connectivity between the management unit and the backup unit
- As the backup management unit takes over, end-user data streams may lose a few packets, but do not lose their IP sessions, such as VoIP calls
- Instant failover from management unit to redundant management unit is hitless for world-class resiliency and availability
- · Back to normal production conditions, hitless failback requires a command in CLI or in GUI, for more control

Adding a second PSU to full width models enables redundant 1+1 power protection and contributes to business continuity management

Distributed Link Aggregation, also called Port Channeling or Port Trunking, offers powerful network redundancy and load balancing between stacked members

- Servers and other network devices benefit from greater bandwidth capacity with active-active teaming (LACP–link aggregation control protocol)
- From a system perspective, a LAG (Link Aggregation Group) is treated as a physical port by M4300 stack for even more simplicity

Rapid Spanning Tree (RSTP) and Multiple Spanning Tree (MSTP) allow for rapid transitionning of the ports to the Forwarding state and the suppression of Topology Change Notification

NETGEAR PVSTP implementation (CLI only) follows the same rules than other vendor's Per VLAN STP for strict interoperability

- Including industry-standard PVST+ interoperability
 - PVSTP is similar to the MSTP protocol as defined by IEEE 802.1s, the main difference being PVSTP runs one
 instance per VLAN
 - In other words, each configured VLAN runs an independent instance of PVSTP
 - FastUplink feature immediately moves an alternate port with lowest cost to forwarding state when the root port goes down to reduce recovery time
 - FastBackbone feature selects new indirect port when an indirect port fails
 - Including industry-standard RPVST+ interoperability
 - PVRSTP is similar to the RSTP protocol as defined by IEEE 802.1w, the main difference being PVRSTP runs one instance per VLAN
 - In other words, each configured VLAN runs an independent instance of PVRSTP
 - Each PVRSTP instance elects a root bridge independent of the other
 - Hence there are as many Root Bridges in the region as there are VLANs configured
 - Per VLAN RSTP has in built support for FastUplink and FastBackbone

NETGEAR PVRSTP implementation (CLI only) follows the same rules than other vendor's Per VLAN RSTP for strict interoperability

IP address conflict detection performed by embedded DHCP servers prevents accidental IP address duplicates from perturbing the overall network stability

IP Event Dampening reduces the effect of interface flaps on routing protocols: the routing protocols temporarily disable their processing (on the unstable interface) until the interface becomes stable, thereby greatly increasing the overall stability of the network

Ease of deployment

Automatic configuration with DHCP and BootP Auto Install eases large deployments with a scalable configuration files management capability, mapping IP addresses and host names and providing individual configuration files to multiple switches as soon as they are initialized on the network

Both the Switch Serial Number and Switch primary MAC address are reported by a simple "show" command in the CLI - facilitating discovery and remote configuration operations

M4300 DHCP L2 Relay agents eliminate the need to have a DHCP server on each physical network or subnet

- DHCP Relay agents process DHCP messages and generate new DHCP messages
- Supports DHCP Relay Option 82 circuit-id and remote-id for VLANs
- DHCP Relay agents are typically IP routing-aware devices and can be referred to as Layer 3 relay agents

Automatic Voice over IP prioritization with Auto-VoIP simplifies most complex multi-vendor IP telephones deployments either based on protocols (SIP, H323 and SCCP) or on OUI bytes (default database and user-based OUIs) in the phone source MAC address; providing the best class of service to VoIP streams (both data and signaling) over other ordinary traffic by classifying traffic, and enabling correct egress queue configuration

An associated Voice VLAN can be easily configured with Auto-VoIP for further traffic isolation

When deployed IP phones are LLDP-MED compliant, the Voice VLAN will use LLDP-MED to pass on the VLAN ID, 802.1P priority and DSCP values to the IP phones, accelerating convergent deployments

Versatile connectivity

24- and 48-port 1G models with 10G uplinks, including 2-port 10GBASE-T and 2-port 10GBASE-X SFP+

IEEE 802.3at Power over Ethernet Plus (PoE+) provides up to 30W power per port using 2 pairs while offering backward compatilibity with 802.3af IEEE 802.3at Layer 2 LLDP method and 802.3at PoE+ 2-event classification method fully supported for compatibility with most PoE+ PD devices

16-, 24-, 48- and 96-port 10G models with a variety of 10GBASE-T and 10GBASE-X SFP+ interfaces

M4300-96X offers 12 slots for 8x10G or 2x40G port expansion cards and hundreds of combinations

Large 10 Gigabit choice with SFP+ ports for fiber or short, low-latency copper DAC cables; 10GBASE-T ports for legacy Cat6 RJ45 short connexions (up to 55m) and Cat6A / Cat7 connections up to 100m

Automatic MDIX and Auto-negotiation on all ports select the right transmission modes (half or full duplex) as well as data transmission for crossover or straight-through cables dynamically for the admin

1G models (M4300-28G and M4300-52G, PoE+ versions included): the 10 Mbps / Half Duplex mode isn't supported on ports 17-24 and 41-48

Link Dependency feature enables or disables one or more ports based on the link state of one or more different ports

IPv6 full support with IPv6 host, dual stack (IPv4 and IPv6), multicasting (MLD for IPv6 filtering and PIM-SM / PIM-DM for IPv6 routing), ACLs and QoS, static routing and dynamic routing (OSPFv3) as well as Configured 6to4 and Automatic 6to4 tunneling for IPv6 traffic encapsulation into IPv4 packets

Ease of management and granular control

Dual firmware image and dual configuration file for transparent firmware updates / configuration changes with minimum service interruption

Flexible Port-Channel/LAG (802.3ad - 802.1AX) implementation for maximum compatibility, fault tolerance and load sharing with any type of Ethernet channeling from other vendors switch, server or storage devices conforming to IEEE 802.3ad - including static (selectable hashing algorithms) - or to IEEE 802.1AX with dynamic LAGs or port-channel (highly tunable LACP Link Aggregation Control Protocol)

LACP mode automatically reverts to and from Static LAG, useful when the host isn't LACP anymore, for instance during a factory reset or re-configuration

Unidirectional Link Detection Protocol (UDLD) and Aggressive UDLD detect and avoid unidirectional links automatically, in order to prevent forwarding anomalies in a Layer 2 communication channel in which a bi-directional link stops passing traffic in one direction

Port names feature allows for descriptive names on all interfaces and better clarity in real word admin daily tasks

SDM (System Data Management, or switch database) templates allow for granular system resources distribution depending on IPv4 or IPv6 applications

- ARP Entries (the maximum number of entries in the IPv4 Address Resolution Protocol ARP cache for routing interfaces)
- IPv4 Unicast Routes (the maximum number of IPv4 unicast forwarding table entries)
- IPv6 NDP Entries (the maximum number of IPv6 Neighbor Discovery Protocol NDP cache entries)
- IPv6 Unicast Routes (the maximum number of IPv6 unicast forwarding table entries)
- ECMP Next Hops (the maximum number of next hops that can be installed in the IPv4 and IPv6 unicast forwarding tables)
- IPv4 Multicast Routes (the maximum number of IPv4 multicast forwarding table entries)
- IPv6 Multicast Routes (the maximum number of IPv6 multicast forwarding table entries)

Loopback interfaces management for routing protocols administration

Private VLANs and local Proxy ARP help reduce broadcast with added security

Management VLAN ID is user selectable for best convenience

Industry-standard VLAN management in the command line interface (CLI) for all common operations such as VLAN creation; VLAN names; VLAN "make static" for dynamically created VLAN by GVRP registration; VLAN trunking; VLAN participation as well as VLAN ID (PVID) and VLAN tagging for one interface, a group of interfaces or all interfaces at once

Simplified VLAN configuration with industry-standard Access Ports for 802.1Q unaware endpoints and Trunk Ports for switch-to-switch links with Native VLAN

System defaults automatically set per-port broadcast, multicast, and unicast storm control for typical, robust protection against DoS attacks and faulty clients which can, with BYOD, often create network and performance issues

IP Telephony administration is simplified with consistent Voice VLAN capabilities per the industry standards and automatic functions associated

Comprehensive set of "system utilities" and "Clear" commands help troubleshoot connectivity issues and restore various configurations to their factory defaults for maximum admin efficiency: traceroute (to discover the routes that packets actually take when traveling on a hop-by-hop basis and with a synchronous response when initiated from the CLI), clear dynamically learned MAC addresses, counters, IGMP snooping table entries from the Multicast forwarding database etc...

Syslog and Packet Captures can be sent to USB storage for rapid network troubleshooting

Replaceable factory-default configuration file for predictable network reset in distributed branch offices without IT personnel

All major centralized software distribution platforms are supported for central software upgrades and configuration files management (HTTP, TFTP), including in highly secured versions (HTTPS, SFTP, SCP)

Simple Network Time Protocol (SNTP) can be used to synchronize network resources and for adaptation of NTP, and can provide synchronized network timestamp either in broadcast or unicast mode (SNTP client implemented over UDP - port 123)

Embedded RMON (4 groups) and sFlow agents permit external network traffic analysis

Engineered for convergence and AV-over-IP

earess

IEEE 1588 (section 10 and 11.5) PTPv2 Transparent

Clock (TC) End-to-End implementation considering

the residence time of PTPv2 packets from ingress to

Audio (Voice over IP) and Video (multicasting) comprehensive switching, filtering, routing and prioritization

Auto-VoIP, Voice VLAN and LLDP-MED support for IP phones QoS and VLAN configuration

The 48-port 10G models (M4300-24X24F, M4300-48X, M4300-48XF) don't support PTPv2 E2E TC

- 1-step Transparent Clock mode, using the residence time of the PPTPv2 packet at the egress port level in Standalone mode, or Stack Master only
- On M4300-52G and M4300-52G-PoE+ models, PTPv2 is supported between port 1 and port 24, and between port 25 and port 48
- The "Sync & Delay_Req" field of passing/egressing out PTPv2 packets is updated with the residence time in the switch, the other fields in PTPv2 packets ("Announce", "Delay_Resp", "Pdelay_Req" and "Pdelay_Resp") are not updated
- IGMP Plus is pre-configured on default VLAN 1 out of the box in all M4300 and M4500 models (M4300: starting 12.0.8.x release)
- IGMP Plus can be configured on another VLAN for automatic IGMP across switches on that VLAN (uplinks can make part of that VLAN in trunk mode)
- IGMP Plus allow AV-over-IP devices (TX/Encoders and RX/Decoders) to be connected across multiple M4300 and M4500 switches in a star topology
- New show igmpsnooping group command in CLI and GUI displays the Source and Group IP addresses along with their corresponding MAC addresses that are learnt through IGMP Snooping in a given VLAN on a given interface

NETGEAR IGMP Plus[™] enhanced implementation for automatic multicast across a M4300 / M4500 L2 network (Spine and Leaf topologies), removing the need for L3 PIM routing

NETGEAR[®] BUSINESS

Data Sheet | **M4300 series** Intelligent Edge Managed Switches

IGMP Snooping and Proxy for IPv4, MLD Snooping and Proxy for IPv6, and Querier mode facilitate fast receivers joins and leaves for multicast streams and ensure multicast traffic only reaches interested receivers everywhere in a Layer 2 or a Layer 3 network, including source-specific (SSM) and any-source (ASM) multicast

Multicast VLAN Registration (MVR) uses a dedicated Multicast VLAN to forward multicast streams and avoid duplication for clients in different VLANs Distance Vector Multicast Routing Protocol (DVMRP) DVMRP uses a distributed routing algorithm to build per-source-group multicast trees is a dense mode multicast protocol also called Broad-• DVMRP assumes that all hosts are part of a multicast group until it is informed of multicast group changes cast and Prune Multicasting protocol • It dynamically generates per-source-group multicast trees using Reverse Path Multicasting • Trees are calculated and updated dynamically to track membership of individual groups • Multicast static routes allowed in Reverse Path Forwarding (RPF) selection Multicast routing (PIM-SM and PIM-DM, both IPv4 and IPv6) ensure multicast streams can reach receivers in • Multicast dynamic routing (PIM associated with OSPF) including PIM multi-hop RP support for routing around different L3 subnets damage advanced capabilities • Full support of PIM (S,G,Rpt) state machine events as described in RFC 4601 • Improved Multicast PIM timer accuracy with hardware abstraction layer (HAPI) polling hit status for multicast entries in real time (without caching) PoE power management and schedule enablement Power redundancy for higher availability when mission critical convergent installation, including hot-swap main PSU replacement without interruption Layer 3 routing package Static Routes/ECMP Static Routes for IPv4 and IPv6 • Static and default routes are configurable with next IP address hops to any given destination • Permitting additional routes creates several options for the network administrator • The admin can configure multiple next hops to a given destination, intending for the router to load share across the next hops • The admin distinguishes static routes by specifying a route preference value: a lower preference value is a more preferred static route • A less preferred static route is used if the more preferred static route is unusable (down link, or next hop cannot be resolved to a MAC address) • Preference option allows admin to control the preference of individual static routes relative to routes learned from other sources (such as OSPF) since a static route will be preferred over a dynamic route when routes from different sources have the same preference • Static Reject Routes are configurable to control the traffic destined to a particular network so that it is not Advanced Static Routing functions for administrative traffic control forwarded through the router • Such traffic is discarded and the ICMP destination unreachable message is sent back to the source • Static reject routes can be typically used to prevent routing loops • Default routes are configurable as a preference option In order to facilitate VLAN creation and VLAN routing • Create a VLAN and generate a unique name for VLAN using Web GUI, a VLAN Routing Wizard offers • Add selected ports to the newly created VLAN and remove selected ports from the default VLAN following automated capabilities: • Create a LAG, add selected ports to a LAG, then add this LAG to the newly created VLAN • Enable tagging on selected ports if the port is in another VLAN • Disable tagging if a selected port does not exist in another VLAN • Exclude ports that are not selected from the VLAN • Enable routing on the VLAN using the IP address and subnet mask entered as logical routing interface

DHCP Relay Agents relay DHCP requests from any routed interface, including VLANs, when DHCP server doesn't reside on the same IP network or subnet

- The agent relays requests from a subnet without a DHCP server to a server or next-hop agent on another
- er subnet
 - Unlike a router which switches IP packets transparently, a DHCP relay agent processes DHCP messages and generates new DHCP messages
 - Supports DHCP Relay Option 82 circuit-id and remote-id for VLANs
 - Multiple Helper IPs feature allows to configure a DHCP relay agent with multiple DHCP server addresses per routing interface and to use different server addresses for client packets arriving on different interfaces on the relay agent server addresses for client packets arriving on different interfaces on the relay agent

Virtual Router Redundancy Protocol (VRRP) provides backup for any statically allocated next-hop router	• VRRP is based on the concept of having more than one router recognize the same router IP address
address going down, based on RFC 3768 (IPv4)	 VRRP increases the availability of the default path without requiring configuration of dynamic routing, or router discovery protocols on end stations
	Multiple virtual routers can be defined on any single router interface
	• One of the routers is elected the master router and handles all traffic sent to the specified virtual router IP address
	• When the master router fails, one of the backup routers is elected in its place and starts handling traffic sent to the address
As an enhancement to RFC 3768, VRRP Interface can be configured as pingable to help troubleshoot	 In that case, VRRP master responds to both fragmented and unfragmented ICMP echo requests packets destined to VRRP address(es)
network connectivity issues	• VRRP master responds with VRRP address as the source IPv4 address and VRMAC as the source MAC address
	• A virtual router in backup state discards these ICMP echo requests
VRRP Route/Interface Tracking feature extends the capability of the Virtual Router Redundancy Protocol	• Allows tracking of specific route/interface IP states, within the router, that can alter the priority level of a virtual router for a VRRP group
(VRRP)	• It ensures the best VRRP router is master for the group
Router Discovery Protocol is an extension to ICMP	• Based on RFC 1256 for IPv4
and enables hosts to dynamically discover the IP ad- dress of routers on local IP subnets	• Routers periodically send router discovery messages to announce their presence to locally-attached hosts
	• The router discovery message advertises one or more IP addresses on the router that hosts can use as their default gateway
	 Hosts can send a router solicitation message asking any router that receives the message to immediately send a router advertisement
	• Router discovery eliminates the need to manually configure a default gateway on each host
	• It enables hosts to switch to a different default gateway if one goes down
Loopback interfaces are available as dynamic, stable IF	addresses for other devices on the network, and for routing protocols
Tunnel interfaces are available for IPv4 and IPv6	• Each router interface (port, or VLAN interface) can have multiple associated tunnel interfaces
	 Support for Configured 6to4 (RFC 4213) and Automatic 6to4 tunneling (RFC 3056) for IPv6 traffic encapsulation into IPv4 packets
	 6to4 tunnels are automatically formed for IPv4 tunnels carrying IPv6 traffic
	 M4300 can act as a 6to4 border router that connects a 6to4 site to a 6to4 domain
Support of Routing Information Protocol (RIPv2) as	 Each route is characterized by the number of gateways, or hops, a packet must traverse to reach its intended
a distance vector protocol specified in RFC 2453 for IPv4	destination
Route Redistribution feature enables the exchange	 Categorized as an interior gateway protocol, RIP operates within the scope of an autonomous system Configurable when different routing protocols use different ways of expressing the distance to a destination
of routing information among different routing protocols all operating within a router	or different metrics and formats
	 For instance, when OSPF redistributes a route from RIP, and needs to know how to set each of the route's path attributes
Open Shortest Path First (OSPF) link-state protocol for IPv4 and IPv6	 For IPv4 networks, OSPF version 2 is supported in accordance with RFC 2328, including compatibility mode for the RFC 1583 older specification
	 For IPv6 networks, OSPF version 3 is fully supported
	• OSPF can operate within a hierarchy, the largest entity within the hierarchy is the autonomous system (AS)
	• An AS is a collection of networks under a common administration sharing a common routing strategy (routing domain)
	• An AS can be divided into a number of areas or groups of contiguous networks and attached hosts
	• Two different types of OSPF routing occur as a result of area partitioning: Intra-area and Inter-area
	• Intra-area routing occurs if a source and destination are in the same area
	• Inter-area routing occurs when a source and destination are in different areas
	An OSPF backbone distributes information between areas

Advanced OSPF implementation for large routing domains

OSPF LSA Pacing feature improves the efficiency of

OSPF Flood Blocking feature allows to disable LSA

flooding on an interface with area or AS (domain-

OSPF Transit-Only Network Hiding is supported

as a network connecting only routers

based on RFC 6860 with transit-only network defined

wide) scope

LSA flooding, reducing or eliminating the packet

drops caused by bursts in OSPF control packets

- OSPF NSSA feature supports RFC 3101, The OSPF Not-So-Stubby Area (NSSA) Option
- Forwarding of OSPF Opaque LSAs is enabled by default
- Passive interface feature can disable sending OSPF routing updates on an interface
- Static Area Range Costs feature allows to configure a fixed OSPF cost that is always advertised when an area range is active
- OSPF Equal Cost Multipath (ECMP) feature allows to forward traffic through multiple paths, taking advantage
 of more bandwidth
- ECMP routes can be learned dynamically, or configured statically with multiple static routes to same destination but with different next hops
- OSPF Max Metric feature allows to to override the metric in summary type 3 and type 4 LSAs while in stub
 router mode
- Automatic Exiting of Stub Router Mode feature allows to exit stub router mode, reoriginating the router LSA with proper metric values on transit links
- Static Area Range Costs feature allows to configure a fixed OSPF cost that is always advertised when an area range is active
- LSA transmit pacing limits the rate of LS Update packets that OSPF can send
- With LSA refresh groups, OSPF efficiently bundles LSAs into LS Update packets when periodically refreshing self-originated LSAs
- In that case, OSPF does not advertise any LSAs with area or AS scope in its database description packets sent to neighbors
- Transit-only networks are usually configured with routable IP addresses which are advertised in LSAs but are not needed for data traffic
- If router-to-router subnets are advertised, remote attacks can be launched against routers by sending packets to these transit-only networks
- Hiding transit-only networks speeds up network convergence and reduces vulnerability to remote attacks
- 'Hiding' implies that the prefixes are not installed in the routing tables on OSPFv2 and OSPFv3 routers

IP Multinetting allows to configure more than one IP address on a network interface (other vendors may call it IP Aliasing or Secondary Addressing)

ICMP Throttling feature adds configuration options for the transmission of various types of ICMP mes- sages	 ICMP Redirects can be used by a malicious sender to perform man-in-the-middle attacks, or divert packets to a malicious monitor, or to cause Denial of Service (DoS) by blackholing the packets ICMP Echo Requests and other messages can be used to probe for vulnerable hosts or routers
	 Rate limiting ICMP error messages protects the local router and the network from sending a large number of messages that take CPU and bandwidth
The Policy Based Routing feature (PBR) overrides routing decision taken by the router and makes the	• It provides freedom over packet routing/forwarding instead of leaving the control to standard routing proto- cols based on L3
packet to follow different actions based on a policy	 For instance, some organizations would like to dictate paths instead of following the paths shown by routing protocols
	Network Managers/Administrators can set up policies such as:
	– My network will not carry traffic from the Engineering department
	 Traffic originating within my network with the following characteristics will take path A, while other traffic will take path B

 When load sharing needs to be done for the incoming traffic across multiple paths based on packet entities in the incoming traffic

Enterprise security

Traffic control MAC Filter and Port Security help restrict the traffic allowed into and out of specified ports or interfaces in the system in order to increase overall security and block MAC address flooding issues

DHCP Snooping monitors DHCP traffic between DHCP clients and DHCP servers to filter harmful DHCP message and builds a bindings database of (MAC address, IP address, VLAN ID, port) tuples that are considered authorized in order to prevent DHCP server spoofing attacks

IP source guard and Dynamic ARP Inspection use the DHCP snooping bindings database per port and per VLAN to drop incoming packets that do not match any binding and to enforce source IP/MAC addresses for malicious users traffic elimination

Time-based Layer 2 / Layer 3-v6 / Layer 4 Access Control Lists (ACLs) can be binded to ports, Layer 2 interfaces, VLANs and LAGs (Link Aggregation Groups or Port channel) for fast unauthorized data prevention and right granularity

NETGEAR[®] BUSINESS

Data Sheet | **M4300 series** Intelligent Edge Managed Switches

For in-band switch management, management ACLs on CPU interface (Control Plane ACLs) are used to define the IP/MAC or protocol through which management access is allowed for increased HTTP/HTTPS or Telnet/SSH management security

Out-of-band management is available via dedicated service port (1G RJ45 OOB) when in-band management can be prohibited via management ACLs

Bridge protocol data unit (BPDU) Guard allows the network administrator to enforce the Spanning Tree (STP) domain borders and keep the active topology consistent and predictable - unauthorized devices or switches behind the edge ports that have BPDU enabled will not be able to influence the overall STP by creating loops Spanning Tree Root Guard (STRG) enforces the Layer 2 network topology by preventing rogue root bridges potential issues when for instance, unauthorized or unexpected new equipment in the network may accidentally become a root bridge for a given VLAN

Dynamic 802.1x VLAN assignment mode, including Dynamic VLAN creation mode and Guest VLAN / Unauthenticated VLAN are supported for rigorous user and equipment RADIUS policy server enforcement 802.1x MAC Address Authentication Bypass (MAB) is a supplemental authentication mechanism that lets non-802.1x devices bypass the traditional 802.1x process altogether, letting them authenticate to the network using their client MAC address as an identifier

With Successive Tiering, the Authentication Manager allows for authentication methods per port for a Tiered Authentication based on configured time-outs

- Up to 48 clients (802.1x) per port are supported, including the authentication of the users domain, in order to facilitate convergent deployments. For instance when IP phones connect PCs on their bridge, IP phones and PCs can authenticate on the same switch port but under different VLAN assignment policies (Voice VLAN versus other Production VLANs)
- A list of authorized MAC addresses of client NICs is maintained on the RADIUS server for MAB purpose
- MAB can be configured on a per-port basis on the switch
- MAB initiates after unsuccessful dot1x authentication process (configurable time out), when clients don't respond to any of EAPOL packets
- When 802.1X unaware clients try to connect, the switch sends the MAC address of each client to the authentication server
- The RADIUS server checks the MAC address of the client NIC against the list of authorized addresses
- The RADIUS server returns the access policy and VLAN assignment to the switch for each client
- By default, configuration authentication methods are tried in this order: Dot1x, then MAB, then Captive Portal (web authentication)
- With BYOD, such Tiered Authentication is powerful and simple to implement with strict policies
 - For instance, when a client is connecting, M4300 tries to authenticate the user/client using the three methods above, the one after the other
- The admin can restrict the configuration such that no other method is allowed to follow the captive portal method, for instance

Double VLANs (DVLAN) pass traffic from one customer domain to another through the "metro core" in a multi-tenancy environment: customer VLAN IDs are preserved and a service provider VLAN ID is added to the traffic so the traffic can pass the metro core in a simple, secure manner

Private VLANs (with Primary VLAN, Isolated VLAN, Community VLAN, Promiscuous port, Host port, Trunks) provide Layer 2 isolation between ports that share the same broadcast domain, allowing a VLAN broadcast domain to be partitioned into smaller point-to-multipoint subdomains accross switches in the same Layer 2 network

- Private VLANs are useful in DMZ when servers are not supposed to communicate with each other but need to communicate with a router
- They remove the need for more complex port-based VLANs with respective IP interface/subnets and associated L3 routing
- Another Private VLANs typical application are carrier-class deployments when users shouldn't see, snoop or attack other users' traffic

SSL version 3 and TLS version 2 ensure Web GUI sessions are secured

Secure Shell (SSH version 2) and SNMPv3 (with or without MD5 or SHA authentication) ensure SNMP and Telnet sessions are secured

2048-bit RSA key pairs, SHA2-256 and SHA2-512 cryptographic hash functions for SSLv3 and SSHv2 are supported on all M4300 models

TACACS+ and RADIUS enhanced administrator management provides strict "Login" and "Enable" authentication enforcement for the switch configuration, based on latest industry standards: exec authorization using TACACS+ or RADIUS; command authorization using TACACS+ and RADIUS Server; user exec accounting for HTTP and HTTPS using TACACS+ or RADIUS; and authentication based on user domain in addition to user ID and password

Superior quality of service

Advanced classifier-based hardware implementation for Layer 2 (MAC), Layer 3 (IP) and Layer 4 (UDP/TCP transport ports) prioritization

8 queues (7 in a stack) for priorities and various QoS policies based on 802.1p (CoS) and DiffServ can be applied to interfaces and VLANs

Advanced rate limiting down to 1 Kbps granularity and mininum-guaranteed bandwidth can be associated with ACLs for best granularity

Single Rate Policing feature enables support for Single Rate Policer as defined by RFC 2697

- Committed Information Rate (average allowable rate for the class)
- Committed Burst Size (maximum amount of contiguous packets for the class)
 - Excessive Burst Size (additional burst size for the class with credits refill at a slower rate than committed burst size)
 - DiffServ feature applied to class maps

Automatic Voice over IP prioritization with protocol-based (SIP, H323 and SCCP) or OUI-based Auto-VoIP up to 144 simultaneous voice calls

iSCSI Flow Acceleration and automatic protection / QoS with Auto-iSCSI

Flow Control

802.3x Flow Control implementation per IEEE 802.3 Annex 31B specifications with Symmetric flow control, Asymmetric flow control or No flow control

Allows traffic from one device to be throttled for a specified period of time: a device that wishes to inhibit transmission of data frames from another device on the LAN transmits a PAUSE frame

The Priority Flow Control (PFC) is standardized by the IEEE 802.1Qbb specification and enables flow control per traffic class on IEEE 802 full-duplex links

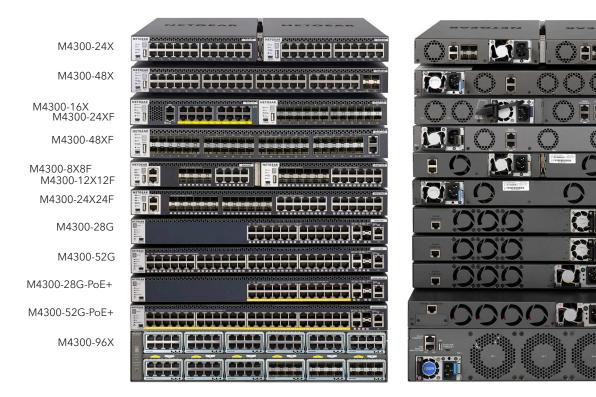

- Asymmetric flow control allows the switch to respond to received PAUSE frames, but the ports cannot generate PAUSE frames
- Symmetric flow control allows the switch to both respond to, and generate MAC control PAUSE frames
- A device that wishes to inhibit transmission of data frames from another device on the LAN transmits a PAUSE frame
- By pausing congested priorities independently, highly loss sensitive protocols can share the same link with traffic that has different loss tolerances
- The priorities are differentiated by the priority field of the 802.1Q VLAN header
- PFC uses a new control packet defined in 802.1Qbb and therefore disables 802.3x standard flow control on PFC configured interfaces
- PFC comes with CLI configuration and it is only supported on M4300-12X12F, 24X, 24X24F, 48X and 96X models

UDLD Support

UDLD implementation detects unidirectional links physical ports (UDLD must be enabled on both sides of the link in order to detect an unidirectional link)

- UDLD protocol operates by exchanging packets containing information about neighboring devices
- The purpose is to detect and avoid unidirectional link forwarding anomalies in a Layer 2 communication channel

Both "normal-mode" and "aggressive-mode" are supported for perfect compatibility with other vendors implementations, including port "D-Disable" triggering cases in both modes

M4300-24X M4300-48X M4300-24XF M4300-48XF M4300-8X8F M4300-24X24F M4300-24X24F M4300-28G M4300-28G-PoE+ M4300-52G-PoE+ M4300-52G-PoE+

.

Target Application (IT)

Building 1

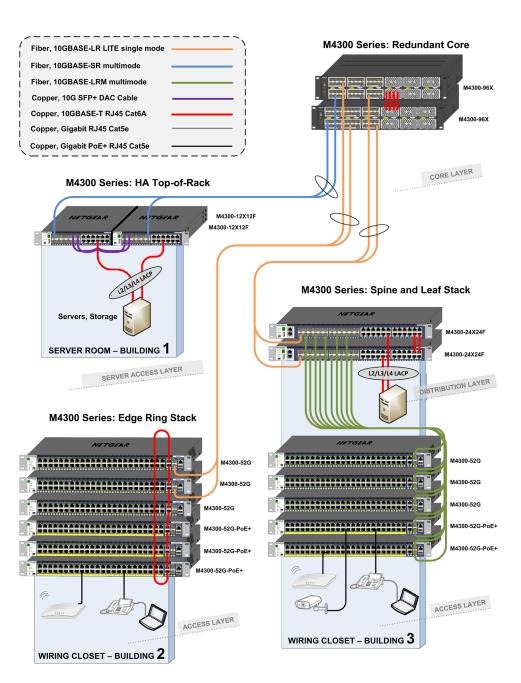

- For midsize server installations, two half-width M4300 10GbE models can be paired in a single rack space for redundant top-of-rack
- Compared with single top-of-rack switch installation, such two-unit horizontal stacking is cost-effective yet highly efficient for HA
- Management unit hitless failover and nonstop forwarding ensure no single point of failure for servers and storage

Building 2

- Common for intermediate distribution frames (IDF) in K-12 and other large campuses, stacking topologies greatly simplify deployments at the edge
- While reducing the number of logical units to manage, stacking also brings network resiliency with distributed uplinks in aggregation to the core
- Management unit hitless failover and nonstop forwarding ensures continuous uptime for clients across the stack

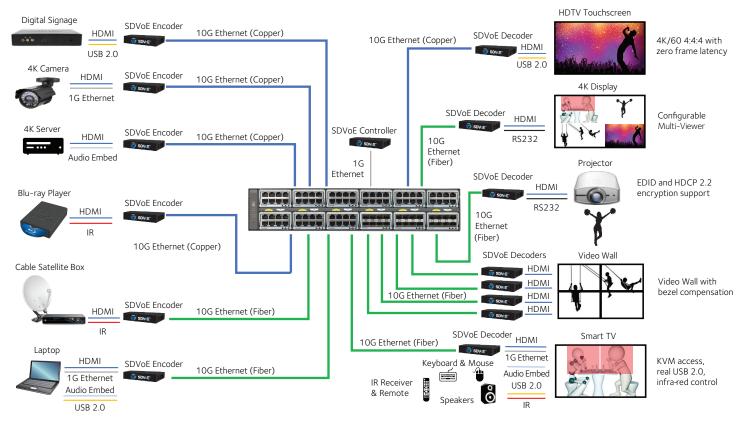

Building 3

- For typical collapsed core installations, with a variety of 1G and 10G access ports in branch offices, server rooms or campus high performance labs
- M4300 10G models can stack with M4300 1G models, enabling innovative "spine and leaf" topologies
- Spine and leaf architectures deliver highest performance with every leaf switch (1G) connecting to every spine switch (10G) for a fully non-blocking deployment
- With management unit hitless failover and nonstop forwarding, leaf switches keep forwarding L2 and L3 traffic in and out, while backup spine unit guarantees connectivity to the core

Target Application (SDVoE)

To take the complexity out of your AV-over-IP deployment, NETGEAR created M4300 switches that are preconfigured for easy, true AV and multicast Zero Touch network configuration. Namely, IGMP Snooping, IGMP Fast Leave, IGMP Querier are already enabled for the default VLAN 1 that all your devices will automatically use. Connect your encoder and decoder devices, and power on the switch - it just works!

Enabling Zero-Touch install of SDVoE Video-over-IP

- M4300-96X streamlines AV-over-IP SDVoE solutions, replacing 48x48 switchers and any other in/out distribution
 - Non-blocking fabric for 96x10G or 24x40G or a combination
- 12 empty slots in 2RU for 8x10G or 2x40G port expansion cards
- Use the M4300-96X online configurator to design your modular switch
 - www.netgear.com/96x-config
- Plug and play and ready to grow as per your requirements
- Takes the complexity out of your AV-over-IP deployment
- Zero Touch AV-over-IP with pre-configured L2 Multicast (SDVoE-ready)
 - IGMP Snooping, IGMP Fast Leave, IGMP Querier are already enabled
- Easy-to-use Web browser-based management GUI

The SDVoE Alliance is an eco-system of companies in and around the AV-over-IP space, working together to create a platform for the next generation of audiovisual applications. NETGEAR SDVoE Partners provide the SDVoE audio-video products and NETGEAR provides the backbone network that makes it all possible.

SDVoE is a trademark of the SDVoE Alliance www.sdvoe.org PAGE 17 of 60

Components and Modules

M4300-8X8F

Stackable Managed Switch

Ordering information

- Americas, Europe: XSM4316S-100NES
- Asia Pacific: XSM4316S-100AJS
- Warranty: Limited Lifetime ProSAFE Hardware Warranty**

- 8-port 10GBASE-T (RJ45) all independent
- 8-port 10GBASE-X (SFP+) all independent
- 320Gbps non-blocking fabric across 16 ports
- Out-of-band 1G Ethernet management port
- Mini-USB and RJ45 RS232 console ports and USB storage port
- Full L3 feature set and non-stop forwarding (NSF) stacking
- Half-width form factor with one- and two-unit rack mount kit
- Two half-width switches can be installed in a single rack space for redundant top-of-rack
- Ships with one modular APS250W PSU in its power supply slot
- Low acoustics (36.9dB @25°C / 77°F), or fans off

To install a single half-width switch in a rack, a 19-inch rack-mount kit is supplied with the switch:

To install two half-width switches in a rack, inside and outside middle mounts and rack-mount brackets are supplied with the switches:

Empty version (XSM4396K0)

48xSFP+ and 1x600W PSU Starter Kit (XSM4396K1)

8x10GBASE-T Port Card - 100M/1G/2.5G/5G/10G (APM408C)

8x10GBASE-T PoE+ Port Card - 100M/1G/2.5G/5G/10G (APM408P)

- 1.92Tbps non-blocking fabric for 96-port 10G or 24-port 40G or a combination
 - 12 slots (front) available in 2RU for 8x10G or 2x40G port expansion cards
 - XSM4396K0 is the SKU for the M4300-96X empty switch (no PSU)
 - XSM4396K1 is the starter kit including 48xSFP+ and 1x600W PSU
- 4 port cards and hundreds of combinations
 - APM408C features 8-port 100M/1G/2.5G/5G/10GBASE-T (copper RJ45)
 - APM408P features 8-port 100M/1G/2.5G/5G/10GBASE-T with PoE+ (copper RJ45)
 - APM408F features 8-port 1G/10GBASE-X (fiber SFP+)
 - APM402XL features 2-port 40GBASE-X (QSFP+)
- PoE over 10G is supported up to 48 x 10G PoE+ 30W per system (first 6 slots)
- Out-of-band 1G Ethernet Management port
- Mini-USB and RJ45 RS232 console ports and USB storage port
- Full L3 feature set and non-stop forwarding (NSF) stacking
- Full width 2RU form factor with 2-post and 4-post rack mount kit
- Ships with blank covers in empty slots (front I/O; rear PSU)
- Low acoustics (35.8dB @25°C / 77°F) when no PoE
- 66.8dB @25°C / 77°F with Max PoE (1,440W)

Accessories

RPS4000v2 RPS unit for up to 4 concurrent switches

Ordering information

- Americas, Europe: RPS4000-200NES
- Asia Pacific: RPS4000-200AJS
- Warranty: 5 years

RPS mode: provide N+1 redundancy to M4300-52G-PoE+ when its two internal PSUs are used in EPS (shared) mode

- One APS1000W per M4300-52G-PoE+ connected to the RPS4000 unit
- Up to four (4) M4300-52G-PoE+ switches per RPS4000 unit

Front view

• RPS4000 is 1RU unit with four (4) empty slots

Rear view

- Four (4) embedded RPS connectors
- Switch selectors for RPS/EPS power modes

Included:

- Four (4) RPS cables 60cm each (~2 ft)
- Rack mount kit

APS1200W Power Supply Unit

Ordering information

- Americas, Europe: APS1200W-100NES
- Asia Pacific: APS1200W-100AJS
- Warranty: 5 years

- Modular PSU for M4300-96X (PoE applications)
- C15 connector
- Capacity:
 - 110V-240V AC power input
 - Up to 1,050W output power at 110V AC
 - Up to 1,200W output power at 220V AC $\,$

APS1000W Power Supply Unit

- Americas, Europe: APS1000W-100NES
- Asia Pacific: APS1000W-100AJS
- Warranty: 5 years

- Power module for RPS4000 unit
- Additionnal PSU for M4300-28G-PoE+ (GSM4328PB) and M4300-52G-PoE+ (GSM4352PB)
- C15 connector
- Capacity:
- 110V-240V AC power input
- Up to 640W output power at 110V AC $\,$
- Up to 910W output power at 220V AC

Accessories

APS600W Power Supply Unit

Ordering information

- Americas, Europe: APS600W-100NES
- Asia Pacific: APS600W-100AJS
- Warranty: 5 years

- Modular PSU for M4300-96X (non-PoE applications)
- Replacement PSU for M4300-16X (PoE applications)
- C14 connector
- Capacity:
- 110V-240V AC power input
- Up to 600W output power at 110/220V AC

Ordering information

- Americas, Europe: APS550W-100NES
- Asia Pacific: APS550W-100AJS
- Warranty: 5 years

- Additional PSU for M4300-28G-PoE+ (GSM4328PA) and M4300-52G-PoE+ (GSM4352PA)
- C14 connector
- Capacity:
 - 110V-240V AC power input
 - Up to 575W output power at 110/220V AC

APS299W Power Supply Unit

- Americas, Europe: APS299W-100NES
- Asia Pacific: APS299W-100AJS
- Warranty: 5 years

- Replacement PSU for M4300-16X (no or limited PoE applications)
- C14 connector
- Capacity:
- 110V-240V AC power input
- Up to 250W output power at 110/220V AC

Accessories

APS250W Power Supply Unit

Ordering information

- Americas, Europe: APS250W-100NES
- Asia Pacific: APS250W-100AJS
- Warranty: 5 years

- Replacement PSU for M4300-8X8F, M4300-12X12F, M4300-24X, M4300-24XF
- Additional PSU for M4300-24X24F, M4300-48X, M4300-48XF
- C14 connector
- Capacity
 - 110V-240V AC power input
 - Up to 250W output power at 110/220V AC

APS150W Power Supply Unit

Ordering information

- Americas, Europe: APS150W-100NES
- Asia Pacific: APS150W-100AJS
- Warranty: 5 years

- Additional PSU for M4300-28G and M4300-52G
- C14 connector
- Capacity:
- 110V-240V AC power input
- Up to 150W output power at 110/220V AC

Copper SFP and SFP+ Optics for M4300 series

AGM734 1000BASE-T RJ45 SFP (Gigabit)

Ordering information

- Worldwide: AGM734-10000S
- Warranty: 5 years

- Fits into M4300 models SFP+ interfaces
- 1 port Gigabit RJ45
- Supports only 1000Mbps full-duplex mode
- Up to 100m (328 ft) with Cat5 RJ45 or better
- Conveniently adds 1G copper connectivity to M4300 fiber interfaces

AXM765 10GBASE-T RJ45 SFP+ (10 Gigabit)

- Worldwide: AXM765-10000S
- Warranty: 5 years

- Fits into M4300 models SFP+ interfaces
- 1 port 10GBASE-T RJ45
- Copper connectivity up to 30 m (98 feet) distance
- CAT6a or better wiring required for 10GBASE-T up to 30 meters
- Conveniently adds 10G copper connectivity to M4300 fiber interfaces

Aurora Multimedia[™] 24 port 10G PoE+ injector

NETGEAR has validated the Aurora Multimedia IP-24PoE+ injector for use with the M4300 switches. It can add PoE/PoE+ up to 30W per port to any 1G or 10G M4300 model. The IP-24PoE+ allows for a clean installation of 1G or 10G PD capable devices, such as 10G AV over IP encoders and decoders.

IP-24PoE+

Highlights

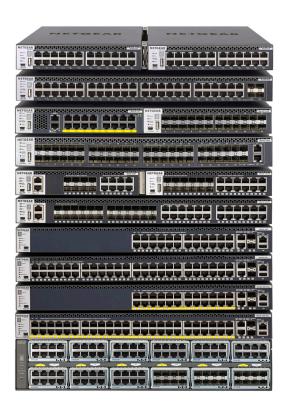

- Input (top): 24 ports 1G/10GBASE-T
- Output (bottom): 24 ports 1G/10GBASE-T with added PoE+
- 30 Watts per port (IEEE 802.3af, IEEE 802.3at)
- 750 Watts total power, 1RU

Please visit https://auroramultimedia.com/products/ip-24poe/ for more information or send an email to sales@auroramm.com for procurement.

Features Support					
IEEE 802.3af (up to 15.4W per port)	Yes				
IEEE 802.3at (up to 30W per port)	Yes				
IEEE 802.3at Layer 2 (LLDP) method IEEE 802.3at 2-event classification	Yes				
PoE timer/schedule (week, days, hours)	Yes				
Processor/Memory					
Processor (CPU) - M4300-96X		Integrated 1.4Ghz CPU in switching silicon			
Processor (CPU) - all other models		Integrated 800Mhz CPU in switching silicon			
System memory (RAM) - M4300-96X		2 GB			
System memory (RAM) - all other models		1 GB			
Code storage (flash) - all other models	256 MB	Dual firmware image			
Packet Buffer Memory	200 1115				
M4300-96X	96 Mb				
	56 Mb				
M4300-24X24F, M4300-48X, M4300-48XF		Dynamically shared across only used ports			
M4300-12X12F, M4300-24X, M4300-24XF	32 Mb				
All other models	16 Mb				
Virtual Chassis Stacking					
Max physical switches per stack		8 (any combination of M4300 switches)			
Max physical ports per stack	384 x 1G por	ts or 768 x 10G ports or 192 x 40G ports or a combination			
Mixed stacking between 1G models and 10G/40G models	Yes				
Mixed stacking table size	Mixed stacking SDM template is used based on "least common denominator" set of capacities				
Stacking ports (pre-configuration)		gured stacking port: any 40G or 10G port (copper, fiber) and edia type (RJ45, SFP+, DAC) can be used for stacking			
Stacking ports (max number)	1G models: up t	o 4 ports per switch 10G models: up to 16 ports per switch			
Vertical and horizontal stacking topologies	Ch	ain, single ring, dual ring, mesh, spine and leaf			
Distant stacking using fiber		Yes			
Non-stop forwarding (NSF)		Yes			
Hitless management unit failover and failback		Yes, no service interruption across the stack			
Automatic unit replacement (AUR)		Yes			
Distributed Link Aggregation (LAGs across the stack)		Yes			
Stack with previous M5300, M7100, M7300 versions		Not supported			
Performance Summary					
Switching fabric					
M4300-8X8F, M4300-16X	320 Gbps				
M4300-12X12F, M4300-24X, M4300-24XF	480 Gbps

Configurable per-interface	Yes
IP DSCP Mapping	Yes

COS Queue Config Queue Parms configurable per-interface Drop Parms configurable per-interface Interface Traffic Shaping (for whole egress interface) Minimum Bandwidth Weighted Deficit Round Robin (WDRR) Support Maximum Queue Weight WRED Support PTP - PTPv2 Feature Support		Yes Yes Yes Yes 127 Yes
PTPv2	All M4300 models, except 48-port 10G models (M	14300-24X24F, M4300-48X, M4300-48XF)
IEEE 1588 PTPv2 Section 10 and 11.5	Yes	
Implementation	Transparent Clock (TC) End-to-End implementation ingress to egress	considering the residence time of PTPv2 packets from
Limitations	Standalone mode, or Stack Master only. On M430 supported between port 1 and port 24, and betwe but not processed (no PTPv1 support).	0-52G and M4300-52G-PoE+ models, PTPv2 is een port 25 and port 48. PTPv1 packets are forwarded
Method	Residence time of the PPTPv2 packet at the egres	s port level
PTPv2 packet fields that are updated	The "Sync & Delay_Req" field of passing/egressing in the switch	g out PTPv2 packets is updated with the residence time
PTPv2 packet fields that are NOT updated	Other fields in PTPv2 packets ("Announce", "Delay updated	y_Resp", "Pdelay_Req" and "Pdelay_Resp") are not
Functional Summary - IETF RFC Standards and IEEE Netwo	rk Protocols	
Core Management		
RFC 854 – Telnet	RFC 3414 – User-Based Security Model	
RFC 855 – Telnet option specifications	RFC 3415 – View-based Access Control Model	
RFC 1155 - SMI v1 RFC 3416 - Version 2 of SNMP Protocol Operations		ns
RFC 1157 – SNMP RFC 3417 – Transport Mappings		
RFC 1212 – Concise MIB definitions RFC 3418 – Management Information Base (MIB) for		for the Simple Network Management Protocol (SNMP)
RFC 1867 – HTML/2.0 forms with file upload extensions	Configurable Management VLAN	
RFC 1901 – Community-based SNMP v2		SSL 3.0 and TLS 1.2
RFC 1908 – Coexistence between SNMP v1 and SNMP v2 $$		- RFC 2246 – The TLS protocol, version 1.0
RFC 2068 – HTTP/1.1 protocol as updated by draft-ietf-http	p-v11-spec-rev-03	- RFC 2346 – AES cipher suites for Transport layer security
RFC 2271 – SNMP framework MIB		- RFC 2818 – HTTP over TLS SSH 2.0
RFC 2295 – Transparent content negotiation		- RFC 4253 – SSH transport layer protocol
RFC 2296 – Remote variant selection; RSVA/1.0 state mana	agement cookies – draft-ietf-http-state-mgmt-05	- RFC 4252 – SSH authentication protocol
RFC 2576 – Coexistence between SNMP v1, v2, and v3 $$		- RFC 4254 – SSH connection protocol
RFC 2578 – SMI v2		- RFC 4251 – SSH protocol architecture
RFC 2579 – Textual conventions for SMI v2		- RFC 4716 – SECSH public key file format
RFC 2580 – Conformance statements for SMI v2		 RFC 4419 – Diffie-Hellman group exchange for the SSH transport layer protocol
RFC 3410 – Introduction and Applicability Statements for I	nternet Standard Management Framework	
RFC 3411 – An Architecture for Describing SNMP Manage	ment Frameworks	HTML 4.0 specification, December 1997
RFC 3412 – Message Processing & Dispatching		Java Script™ 1.3
RFC 3413 – SNMP Applications		

Advanced Management	
Industry-standard CLI with the following features: - Scripting capability - Command completion - Context-sensitive help	Optional user password encryption Multisession Telnet server Auto Image Upgrade
Core Switching	
IEEE 802.1AB – Link level discovery protocol	IEEE 802.3ba – 40GbE (M4300-96X)
IEEE 802.1D – Spanning tree	IEEE 802.3ad – Link aggregation
IEEE 802.1p – Ethernet priority with user provisioning and mapping	IEEE 802.3ae – 10 GbE
IEEE 802.1Q – Virtual LANs w/ port-based VLANs	IEEE 802.3af – Power over Ethernet
IEEE 802.1S – Multiple spanning tree compatibility	IEEE 802.3at – Power over Ethernet Plus
IEEE 802.1v – Protocol-based VLANs	IEEE 802.3x – Flow control
IEEE 802.1W – Rapid spanning tree	ANSI/TIA-1057 – LLDP-MED
iEEE 802.1AB – LLDP	GARP – Generic Attribute Registration Protocol: clause 12, 802.1D-2004
IEEE 802.1X – Port-based authentication	GMRP – Dynamic L2 multicast registration: clause 10, 802.1D-2004
IEEE 802.3 – 10Base-T	GVRP – Dynamic VLAN registration: clause 11.2, 802.1Q-2003
IEEE 802.3u – 100Base-T	RFC 4541 – IGMP snooping and MLD snooping
IEEE 802.3bz-2016 – 2.5G and 5GBASE-T (M4300-96X)	RFC 5171 – UniDirectional Link Detection (UDLD) Protocol
Additional Layer 2 Functionality	
Broadcast storm recovery	IGMP and MLD snooping querier
Double VLAN/VMAN tagging	Port MAC locking
DHCP Snooping	MAC-based VLANs
Dynamic ARP inspection	IP source guard
Independent VLAN Learning (IVL) support	IP subnet-based VLANs
IPv6 classification APIs	Voice VLANs
Jumbo Ethernet frames	Protected ports
Port mirroring	IGMP snooping
Static MAC filtering	Green Ethernet power savings mode
System Facilities	
Event and error logging facility	RFC 2030 – Simple Network Time Protocol (SNTP) V4 for IPv4, IPv6, and OSI
Runtime and configuration download capability	RFC 2131 – DHCP Client/Server
PING utility	RFC 2132 – DHCP options and BOOTP vendor extensions
XMODEM	RFC 2865 – RADIUS client
RFC 768 – UDP	RFC 2866 – RADIUS accounting

RFC 783 – TFTP	RFC 2868 – RADIUS attributes for tunnel protocol support
RFC 791 – IP	RFC 2869 – RADIUS extensions
RFC 792 – ICMP	RFC 28869bis – RADIUS support for Extensible Authentication Protocol (EAP)
RFC 793 – TCP	RFC 5176 – RADIUS Change of Auth
RFC 826 – ARP	RFC 3164 – The BSD syslog protocol with RFC 5424 update
RFC 951 – BOOTP	RFC 3580 – 802.1X RADIUS usage guidelines
RFC 1321 – Message digest algorithm	Power Source Equipment (PSE) IEEE 802.af Powered Ethernet (DTE Power via MDI) standard
RFC 1534 – Interoperability between BOOTP and DHCP	
Core Routing	
RFC 826 – Ethernet ARP	RFC 2328 – OSPFv2
RFC 894 – Transmission of IP datagrams over Ethernet networks	RFC 2385–Protection of BGP Sessions via the TCP MD5 Signature Option
RFC 896 – Congestion control in IP/TCP networks	RFC 2453 – RIP v2
RFC 1027 – Using ARP to implement transparent subnet gateways (Proxy ARP)	RFC 3021 – Using 31-Bit Prefixes on Point-to-Point Links
RFC 1256 – ICMP router discovery messages	RFC 3046 – DHCP/BOOTP relay
RFC 1321 – Message digest algorithm	RFC 3101 – The OSPF "Not So Stubby Area" (NSSA) option
RFC 1519 – CIDR	RFC 3768 – Virtual Router Redundancy Protocol (VRRP)
RFC 1765 – OSPF database overflow	RFC 3623–Graceful OSPF Restart
RFC 1812 – Requirements for IPv4 routers	Route redistribution across RIP, BGP, and OSPF
RFC 2082 – RIP-2 MD5 authentication	VLAN routing
RFC 2131 – DHCP relay	VEAN routing
Quality of Service - DiffServ	
RFC 2474 – Definition of the differentiated services field (DS Field) in IPv4/IPv6 headers	RFC 2697 – A Single Rate Three Color Marker
RFC 2475 – An architecture for differentiated services	RFC 3246 – An expedited forwarding PHB (Per-Hop Behavior)
RFC 2597 – Assured forwarding PHB group	RFC 3260 – New terminology and clarifications for DiffServ
Quality of Service - Access Control Lists (ACLs)	
 Permit/deny actions for inbound or outbound IP traffic classification based on: Type of service (ToS) or differentiated services (DS) DSCP field Source IP address Destination IP address TCP/UDP source port TCP/UDP destination port IPv6 flow label IP protocol number 	 Permit/deny actions for inbound or outbound Layer 2 traffic classification based on: Source MAC address Destination MAC address EtherType VLAN identifier value or range (outer and/or inner VLAN tag) 802.1p user priority (outer and/or inner VLAN tag) Optional rule attributes: Assign matching traffic flow to a specific queue Redirect or mirror (flow-based mirroring) matching traffic flow to a specific port Generate trap log entries containing rule hit counts

Quality of Service - Class of Service (CoS)	
 Direct user configuration of the following: IP DSCP to traffic class mapping IP precedence to traffic class mapping Interface trust mode: 802.1p, IP Precedence, IP DSCP, or untrusted Interface traffic shaping rate Minimum and maximum bandwidth per queue Strict priority versus weighted (WRR/WDRR/WFQ) scheduling per queue Tail drop versus Weighted Random Early Detection (WRED) queue depth management 	Auto VoIP
Core Multicast	
RFC 1112 – Host extensions for IP multicasting	RFC3973 – PIM-DM
RFC 2236 – IGMP v2	RFC4601 – PIM-SM
RFC 2710 – MLDv1	Draft-ietf-idmr-dvmrp-v3-10 – DVMRP
RFC 2365 – Administratively scoped boundaries	Draft-ietf-magma-igmp-proxy-06.txt – IGMP/MLD-based multicast forwarding (IGMP/MLD proxying)
RFC 3376 – IGMPv3	Draft-ietf-magma-igmpv3-and-routing-05.txt – IGMPv3 and multicast routing protocol interaction
RFC3810 – MLDv2	Static RP configuration
Core IPv6 Routing	
RFC 1981 – Path MTU for IPv6	RFC 3513 – Addressing architecture for IPv6
RFC 2373 – IPv6 addressing	RFC 3542 – Advanced sockets API for IPv6
RFC 2460 – IPv6 protocol specification	RFC 3587 – IPv6 global unicast address format
RFC 2461 – Neighbor discovery	RFC 3736 – Stateless DHCPv6
RFC 2462 – Stateless autoconfiguration	RFC 4213 – Basic transition mechanisms for IPv6
RFC 2464 – IPv6 over Ethernet	RFC 4291 – Addressing architecture for IPv6
RFC 2711 – IPv6 router alert	RFC 4443 – Internet Control Message Protocol (ICMPv6) for the IPv6 Specification
RFC 3056–Connection of IPv6 Domains via IPv4 Clouds	RFC 5340–OSPF for IPv6
RFC 3315 –Dynamic Host Configuration Protocol for IPv6 (DHCPv6)	RFC 5187 –OSPFv3 Graceful Restart
RFC 3484 – Default address selection for IPv6	RFC 6164 – Using 127-Bit IPv6 Prefixes on Inter-Router Links
RFC 3493 – Basic socket interface for IPv6	RFC 6583 – Operational Neighbor Discovery Problems
Supported MIBs	
Base Package MIBs MIBs ca	n be dowloaded here: http://www.netgear.com/support/product/M4300-8X8F?cid=#download
ANSI/TIA-1057 – LLDP-EXT-MED-MIB	RFC 2674 – Q-BRIDGE-MIB
DIFFSERV DSCP TC (Draft – no RFC)	RFC 2677 – IANA Address Family Numbers MIB
DNS-RESOLVER-MIB (IETF DNS Working Group)	RFC 2819 – RMON MIB
DNS-SERVER-MIB (IETF DNS Working Group)	RFC 2925 – DISMAN-PING-MIB and DISMAN-TRACEROUTE-MIB
GreenEthernet Private MIB	RFC 3273 – RMON MIB for High Capacity Networks
IANA-ADDRESS-FAMILY-NUMBERS-MIB (IANA (3/2002)	RFC 3411 – SNMP Management Frameworks MIB
IEEE 802.1AB-2004 – LLDP MIB	RFC 3411 – SNMP-FRAMEWORK-MIB

IEEE 802.1AB-2005 – LLDP-EXT-DOT3-MIB	RFC 3412 – SNMP-MPD-MIB
POWER ETHERNET MIB (Draft – no RFC)	RFC 3413 – SNMP-NOTIFICATION-MIB
RFC 1155 – SMI-MIB	RFC 3413 – SNMP-PROXY-MIB (initial revision published as RFC 2273)
RFC 1450 – SNMPV2-MIB	RFC 3413 – SNMP-TARGET-MIB (initial revision published as RFC 2273)
RFC 2273 – SNMP Notification MIB, SNMP Target MIB	RFC 3414 – User-based Security Model for SNMPv3 MIB
RFC 2392 – IANA RTPROTO-MIB	RFC 3415 – View-based Access Control Model for SNMP MIB
RFC 2572 – SNMP Message Processing and Dispatching MIB	RFC 3417 – SNMPV2-TM
RFC 2574 – User-based Security Model for SNMPv3 MIB	RFC 3418 – SNMPv2 MIB
RFC 2575 – View-based Access Control Model for SNMP MIB	RFC 3434 – RMON MIB Extensions for High Capacity Alarms

RFC 5240 – BSR Protocol MIB	FASTPATH Enterprise MIBs supporting multicast	eatures	
Management			
Password management		Yes	
Configurable Management VLAN		Yes	
Out-of-band Management	Yes	In-band management can be shut down using Management ACLs when separate management network	
Auto Install (BOOTP and DHCP options 66, 67, 150 and 55, 125)	Yes	Scalable deployment process (firmware, config)	
Admin access control via Radius and TACACS+	Yes	Policies, Enable	
Industry standard CLI (IS-CLI)	Yes	Command Line interface	
CLI commands logged to a Syslog server	Yes		
Web-based graphical user interface (GUI)	Yes	Fully functional GUI (exceptions are noted below:)	
Features without Web GUI support PFC (Priority Flow Control) PV(R)STP Authorization List Control Plane ACL UDLD Policy Based Routing LLPF QoS Policy for Single Rate DHCPv6 Snooping IPv6 DHCP Relay eMail Alerting MMRP Telnet	CLI only PFC only supported on M4300-12X CLI only CLI only	12F, 24X, 24X24F, 48X and 96X	
lalpot	Yes		

NETGEAR® BUSINESS

IPv6 management	Yes
Dual Software (firmware) image	Yes Allows non disruptive firmware upgrade process
Editable Configuration file	Yes Text-based (CLI commands) configuration file
Non disruptive Config Management	Yes With new startup configuration file, the switch gracefully resolves any differences with the running config
IS-CLI Scripting	Yes
Port descriptions	Yes
SNTP client over UDP port 123	Yes Provides synchronized network timestamp either in broadcast or unicast mode
XMODEM	Yes
SNMP v1/v2	Yes
SNMP v3 with multiple IP addresses	Yes
RMON 1,2,3,9 Max History entries Max buckets per History entry Max Alarm entries Max Event entries Max Log entries per Event entry	Yes 3 * (number of ports in the chassis + LAG + 10) 10 3 * (number of ports in the chassis + LAG + 10) 3 * (number of ports in the chassis + LAG + 10) 10
Port Mirroring Number of monitor sessions Tx/Rx Many to One Port Mirroring LAG supported as source ports Max source ports in a session	Yes 1 (multiple sessions are configurable) Yes Yes Yes Total switch port count
Remote Port Mirroring (RSPAN)	Yes When a particular session is enabled, any traffic entering or leaving the source ports of that session is copied (mirrored) onto a Remote Switched Port Analyzer (RSPAN) VLAN
	Yes When a particular session is enabled, any traffic entering or leaving the source ports of that session is
Remote Port Mirroring (RSPAN)	Yes When a particular session is enabled, any traffic entering or leaving the source ports of that session is copied (mirrored) onto a Remote Switched Port Analyzer (RSPAN) VLAN
Remote Port Mirroring (RSPAN) Flow based mirroring	Yes When a particular session is enabled, any traffic entering or leaving the source ports of that session is copied (mirrored) onto a Remote Switched Port Analyzer (RSPAN) VLAN Yes
Remote Port Mirroring (RSPAN) Flow based mirroring Cable Test utility	Yes When a particular session is enabled, any traffic entering or leaving the source ports of that session is copied (mirrored) onto a Remote Switched Port Analyzer (RSPAN) VLAN Yes Yes CLI, Web GUI
Remote Port Mirroring (RSPAN) Image: Cable Test utility Cable Test utility Image: Cable Test utility Outbound Telnet Image: SSHv2	Yes When a particular session is enabled, any traffic entering or leaving the source ports of that session is copied (mirrored) onto a Remote Switched Port Analyzer (RSPAN) VLAN Yes Yes Yes Yes Yes Yes Secure Shell version 2 (OpenSSH 7.5p1)
Remote Port Mirroring (RSPAN) Image: Compare the second secon	Yes When a particular session is enabled, any traffic entering or leaving the source ports of that session is copied (mirrored) onto a Remote Switched Port Analyzer (RSPAN) VLAN Yes Yes Yes Yes Yes Secure Shell version 2 (OpenSSH 7.5p1)
